

WHAT'S IN YOUR BRAKE PAD.

Elastic Graphite

- Dissipates heat transfer for optimised friction coefficient and stopping performance

Aramid Fibre

- Also known as Kevlar®
- Extends pad life
- Increases resistance to heat fade

Metal Sulphide

- Reduce rotor wear
- Stabilises friction coefficient
- Reduce pad wear

Potassium Titanate

- Increased brake performance
- Dampens noise
- Extends service life
- Reduces dust

Zirconium Silicate

- Enhances friction coefficient
- Contributes to stopping performance
