

BRAKE PAD WEAR.

Brake pads play a crucial role in a vehicle's braking system. Over time, they are subjected to wear due to abrasive action with the disc rotor, which is why Protex brake pads are engineered to withstand the toughest situations and provide longer lasting performance. Protex pads offer premium performance, from stop-start movements through city streets to hilly countryside terrain. The life of a brake pad can vary anywhere from 30,000km to 70,000km on average. However, lower, or greater service intervals can result.

WHY CHOOSE PROTEX?

STRONG WEAR RESISTANCE

Protex Ultra Ceramic, Ultra Ceramic Plus, and Ultra 4WD brake pads are made from the highest quality and innovative technology, using ceramic materials to ensure optimal wear resistance.

NO BEDDING-IN TIME REQUIRED

Protex Ultra Ceramic, Ultra Ceramic Plus, and Ultra 4WD brake pads are designed to be used immediately out of the box, with no bedding in time required, creating a quicker and hassle-free installation.

ENVIRONMENTALLY FRIENDLY

Protex brake pads contain minimal to zero copper in their friction formulation, reducing environmental impact without compromising performance and keeping in line with global industry standards.

LOW-NOISE

Designed with shims, chamfers, and slots to mitigate noise and vibration, Protex brake pads provide a comfortable and quiet braking experience.
