

FOR ALL THINGS ADVENTURE.

Protex Ultra 4WD rotors excel in performance and value, setting the standard in braking.

Ultra 4WD Disc Rotors are built to withstand rugged off-road, towing, and heavy-duty use while remaining suitable for daily driving.

Key Features

1. A directional 6-slot brake rotor design for improved braking, better pedal feel, and reduced brake fade. Designed for low pad wear rates, it prevents glazing, clears debris for off-roading, and aids brake drying during wet conditions.
2. High carbon composition for optimal heat dissipation and resistance to brake fade, even under extreme applications, such as towing, GVM upgrades, and thermal shock from river crossings.
3. A range of OE-aligned rotor vent designs including pillar, straight, and curved vanes, increasing performance by ensuring efficient rotor cooling.
4. Ultra 4WD rotors feature our exclusive Ultracoat Z360® formula that enhances corrosion protection for extended service life and an improved appearance. They're ready for immediate installation and our exclusive Z360® coating protects against off-road water immersion effects.
5. Precision manufacturing - from raw materials to casting and machining - results in precisely ground and balanced rotors. This process enhances brake bedding and rotor conditioning, which minimises brake noise, vibration and harshness, even with larger wheels and increased axle weight.
